SUMMARY

Master's degree in Computer Science and a Bachelor's degree in Information Technology from LJ University. Proficient in Python, Java, JavaScript, and MongoDB, with hands-on experience across Django, the MERN stack, and TensorFlow. Strongly motivated to build scalable full-stack applications, advance AI/ML solutions, and deliver innovation through data-driven systems.

EXPERIENCE

Aerocraft Engineering (India) Private Limited (11 August 2026 - Currently Working)

Orion Mobile - Email, Chat & Help Desk (Ionic / Angular)

- Developed production-ready Email, Chat, and Help Desk modules using Ionic 8, Angular 19, and Capacitor 7, integrating existing REST and Socket.io APIs.
- Implemented email workflows including threaded conversations, compose, drafts, attachments, signatures, and HTML email rendering; delivered real-time chat with channels, threads, file sharing, polls, mentions, and notifications.
- Integrated Help Desk workflows and secure multi-tenant sessions, enabling seamless communication and support across entire platform, Android, and web preview environments.

REN-Admin Panel - Multi-Tenant SaaS Control Plane

- Developed an Angular 19 administration console for managing companies, clients, subscription plans, module catalogues, roles and permissions, and domain master data, including material masters and OST configuration.
- Implemented permission-driven UI, tenant provisioning workflows, plan/module configuration, user access control, and data synchronization through REN control-plane APIs within a multi-tenant SaaS architecture.

Freelance Software Developer - Perigeon Software (10 May 2026 – 20 July 2026)

Certopact (Visitor Management System)

- Developed advanced visitor management modules using HTML, CSS, JavaScript, C#, and ASP.NET/.NET, integrating Zoop APIs for Aadhaar verification and face liveness detection.
- Contributed to enterprise-grade visitor registration, verification, and access management workflows for Adani, ensuring secure and compliant visitor management, read details of product at perigeon.com/products/certopact/.

Internship at BIMBOSS CONSULTANTS (12 Jan 2026 - 21 Apr 2026)

AI-Enabled Digital Twin Platform for Telecom Infrastructure

- Developed a scalable AI-enabled digital twin platform for telecom towers, enabling real-time 3D visualization, centralized asset management, and lifecycle tracking.
- Built a high-performance full-stack system with React, TypeScript, and Cesium, integrating Supabase, AWS S3 and Onedrive for secure file handling and multi-format model support.
- Implemented dynamic site management, bulk operations, and a responsive UI, delivering a production-ready, cloud-deployed solution with improved efficiency and reduced manual effort.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript and PHP
- Frameworks: Django, MERN (MongoDB, Express.js, React, Node.js), Angular, Laravel, TensorFlow, Keras and Scikit-learn
- Technologies: NLP, Machine Learning, Deep Learning, Computer Vision, GANs, API Integration, Responsive Web Design and Git, Inertia.js

Tools: OpenCV, Matplotlib, NumPy, TQDM and ImageIO

PROJECTS

IGAN-Face-Generation (High-Resolution Face Generation)

- Developed a custom TensorFlow-based GAN to generate realistic human faces.
- Utilized Keras, OpenCV, NumPy, and Matplotlib for image processing and visualization.
- Created training progress GIFs and checkpoints, achieving high-resolution outputs over 200 epochs.

Sentiment Analysis (ChatGPT Tweets)

- Built a system using CatBoost, LightGBM, XGBoost, and CNN, achieving 83%+ accuracy.
- Applied CTGAN for data augmentation, K-Means, hierarchical clustering, and PCA with Python, TensorFlow, and NLP tools.

Zentro (Comprehensive ERP & CRM Solution)

- Independently built a full-stack ERP/CRM system with document management, real-time chat, lead/deal tracking, Used five apis collaboratively in Chat-bot and customer analytics.
- Automated user data handling for efficient, scalable management.

Rhythm Realm (Music Streaming Platform)

- Developed a MERN stack app with Spotify API, Google OAuth, and JWT authentication.
- Implemented playlists, history, and responsive dark/light modes for scalable, secure playback.

Admission Bot (LJ University)

- Created a Tkinter-based AI chatbot with 75%+ FAQ accuracy using NLTK, TF-IDF, and Fuzzy-Wuzzy.
- Integrated multilingual support (Google Translate) and summarization (TextBlob), with BERT compatibility.

CustomerSync (Full-Stack CRM Solution)

- Built with Angular, Node.js/Express, and MongoDB, featuring responsive UI and secure APIs.
- Automated user data handling for efficient, scalable management.

Collaboratively engineered a full-stack online learning platform

- Built interactive course modules with real-time collaboration, progress tracking, and secure document sharing for seamless user engagement.
- Integrated five APIs into a chatbot and analytics engine for personalized recommendations, instant feedback, and data-driven insights.
- Automated scalable user onboarding and data workflows, supporting high concurrency while ensuring privacy and efficiency.

CMS System (Content Management Platform)

- Independently built a full-stack CMS using React, Tailwind CSS, Inertia.js, and Laravel with content management, user authentication, and role-based access control.
- Streamlined content publishing and administrative workflows through a responsive, scalable, and secure platform.

EDUCATION

Bachelor of Science in Information Technology

L.J University | 06/2021 - 07/2023 | Ahmedabad, Gujarat

Master of Science in Information Technology

L.J University | 06/2024 - 07/2026 | Ahmedabad, Gujarat

KEY ACHIEVEMENTS

- Generated high-resolution faces using a custom IGAN with TensorFlow, showcasing deep learning and computer vision expertise.
- Achieved 83%+ accuracy in sentiment analysis for ChatGPT tweets using GAN, CNN, and CatBoost.
- Developed an AI-powered chatbot for LJ University with >75% FAQ accuracy and multilingual support.
- Built a scalable MERN-based music streaming platform with Spotify API integration.
- Presented a poster at an international conference, earning certificates.

CERTIFICATES

- **Full-Stack Web Development (MERN Stack):** Mastered MongoDB, Express.js, React, and Node.js.
- **Machine Learning with Python:** Built models using TensorFlow and Scikit-learn.
- **Cyber Security Fundamentals:** Google Certification.

For more certificates visit my Coursera Account: <https://www.coursera.org/learner/chiragsingh>
